Fill out:

Required Fields: Strain

Test Type -

Recommended Fields:

Stage -Days in Stage

Location

Harvest Group

Grouping Code

4. Start Sampling the Plant:

Optional Fields:

Use a clean pair of gloves for each sample collected.

• Gently expose the top portion of the plant's root.

 Carefully remove and collect 10, one-inch segments of root, per sample.

• Spray sample residual with R.O. water to remove any residual soil/particulate matter.

Gently pat dry the root sample with paper towels or napkins.

• Transfer the collected sample's roots to a clean and labeled Arvum pouch or sample bag.

5. Repeat these steps for any additional samples or overnight samples to ensure no tissue degradation.
